

## Adding Weather Elements to the Grid Manager

In many cases you will need to add elements to the Grid Manager. The Weather Element Browser can do this.

Step	Action	Notes
1	Select <b>WeatherElement</b> from the Menu Bar.	
2	Select <b>Weather Element Browser</b> .	

In the Weather Element Browser interface, the elements already loaded in the Grid Manager are listed in the bottom window.

3	<p>Select elements in the following columns to add data:</p> <ul style="list-style-type: none"> <li>a) <b>Type</b> – select IFP for GFE grid databases; D2D for raw model data</li> <li>b) <b>Source</b> – select the database(s) from which you want data</li> <li>c) <b>Fields</b> – select the elements you wish to add</li> <li>d) <b>Plane</b> – select the level(s) you wish to view</li> </ul>	Almost all IFP database grids are only available for the SFC plane.
4	<p>Select <b>Load and Dismiss</b> once all entries are selected (they will be listed in the bottom window).</p> <p><b>Result:</b> the elements are now available in the Grid Manager.</p>
